# start Zoom recording

# Agenda

Course evaluations — thank you!

Announcements

Lecture

- Geocoding
- Command line basics
- GitHub (if time)

BREAK (at some point)

# Announcements

- Check Office Hours (extra credit) assignment to make sure I gave you extra credit
- Final Project presentation is next week (review rubric)
- Final Project notebooks (WITH DATA) are due **Dec. 11** (side note: I said we could change this date, depending on your schedules)

# Geocoding

Download notebooks from [class website](#)

# Break

Meet back in 15 minutes.

# Using the Terminal

# Terminal

## Terminology

First commands: date, cal, clear, man

Navigate: pwd, ls, cd

Create/modify: touch, cat

Read: cat, less, head, tail, wc

Organize: mkdir, cp, mv, ! rm

Your Macbook OS is based on **Unix**, a type of operating system developed in the late 1960s. (You can find a short history of Unix in the recommended reading.)

A **shell** is a Unix program that takes the commands you enter and interprets them for a Unix operating system. There are lots of shells.

**Bash** is a popular shell and was used by default on Macbooks until recently; **zsh** (Z Shell) is now the default shell on new Macbooks.

# Terminal

Terminology

First commands: date,  
cal, clear, man

Navigate: pwd, ls, cd

Create/modify: touch,  
cat

Read: cat, less, head,  
tail, wc

Organize: mkdir, cp,  
mv,  rm

On Windows, the shell interface is titled  
**Command Prompt.**

**Terminal** is the shell interface app on  
Macbooks.

People often use the following terms  
**interchangeably:**

- shell
- command prompt
- command line
- command-line interface
- terminal

# Terminal

## Terminology

First commands: date, cal, clear, man

Navigate: pwd, ls, cd

Create/modify: touch, cat

Read: cat, less, head, tail, wc

Organize: mkdir, cp, mv, ! rm

## First, adjust **Security & Privacy** settings

# Terminal

## Terminology

First commands: date,  
cal, clear, man

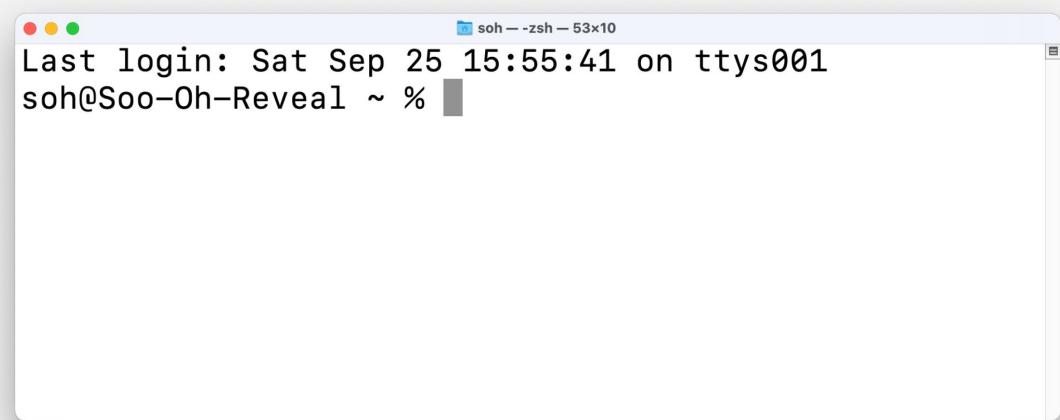

Navigate: pwd, ls, cd

Create/modify: touch,  
cat

Read: cat, less, head,  
tail, wc

Organize: mkdir, cp,  
mv, ! rm

Let's open up **Terminal**

# Terminal

## Terminology

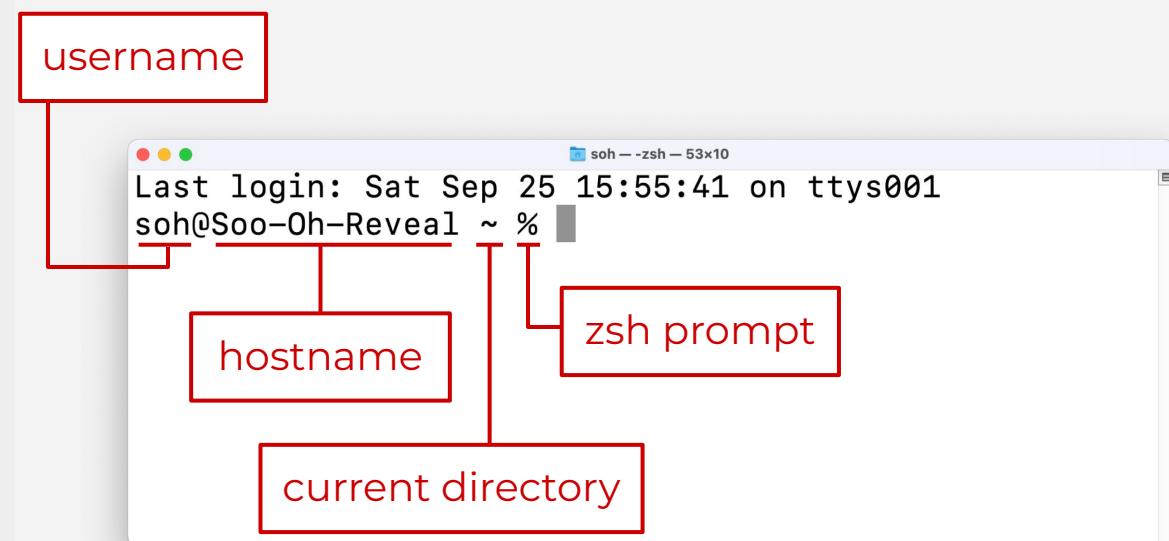

First commands: date, cal, clear, man

Navigate: pwd, ls, cd

Create/modify: touch, cat

Read: cat, less, head, tail, wc

Organize: mkdir, cp, mv, ! rm

# Terminal

## Terminology

First commands: date, cal, clear, man

Navigate: pwd, ls, cd

Create/modify: touch, cat

Read: cat, less, head, tail, wc

Organize: mkdir, cp, mv, ! rm

In our course slides, shell commands will be denoted with a percent sign (%), which indicates the shell is **zsh**.

```
% cal
```

If you look up shell commands online, you'll often see them with a dollar sign (\$) instead. The dollar sign indicates the shell is **bash**.

```
$ cal
```

 **You should not copy % or \$ into your terminal!** 

# Terminal

Terminology

First commands: `date`,  
`cal`, `clear`, `man`

Navigate: `pwd`, `ls`, `cd`

Create/modify: `touch`,  
`cat`

Read: `cat`, `less`, `head`,  
`tail`, `wc`

Organize: `mkdir`, `cp`,  
`mv`,  `rm`

## date

```
Last login: Sun Sep 27 17:41:53 on ttys001

```

## Screenshare

Note to Fall 2023 students:  
forgive the 2021  
copy/pastes, but it takes a  
surprisingly long time to  
reformat slides. I'm  
screensharing the  
commands, so pay  
attention to the screen!

# Terminal

CAL(1) BSD General Commands Manual CAL(1)

NAME
    cal, ncal -- displays a calendar and the date of Easter

SYNOPSIS
    cal [-3hjy] [-A number] [-B number] [[month] year]
    cal [-3hj] [-A number] [-B number] -m month [year]
    ncal [-3hJpwy] [-A number] [-B number] [-s country_code] [[month] year]
    ncal [-3hJeo] [-A number] [-B number] [year]
    ncal [-CN] [-H yyyy-mm-dd] [-d yyyy-mm]

DESCRIPTION
    The cal utility displays a simple calendar in traditional format and ncal
    offers an alternative layout, more options and the date of Easter. The
    new format is a little cramped but it makes a year fit on a 25x80 termi-
    nal. If arguments are not specified, the current month is displayed.

    The options are as follows:

    -h      Turns off highlighting of today.

Pacific Ocean through the seas which surround the pole. You may remember that a history of all the voyages made for purposes of discovery composed the whole of our good Uncle Thomas' library. My education was neglected, yet I was passionately fond of reading. These volumes were my study day and night, and my familiarity with them increased that regret which I had felt, as a child, on learning that my father's dying injunction had forbidden my uncle to allow me to embark in a seafaring life.

### Screenshare

These visions faded when I perused, for the first time, those poets whose effusions entranced my soul and lifted it to heaven. I also became a poet and for one year lived in a paradise of my own creation; I imagined that I also might obtain a niche in the temple where the names of Homer and Shakespeare are consecrated. You are well acquainted with my failure and how heavily I bore the disappointment. But just at that time I inherited the fortune of my cousin, and my thoughts were turned into the channel of their earlier bent.%

## **less** (read big file up and down)

```
soh@Soo-Oh-Reveal Downloads % less test_file.txt
```

```
You will rejoice to hear that no disaster has accompanied the commencement of an enterprise which you have regarded with such evil forebodings. I arrived here yesterday, and my first task is to assure my dear sister of my welfare and increasing confidence in the success of my undertaking.

I am already far north of London, and as I walk in the streets of Petersburgh, I feel a cold northern breeze play upon my cheeks, which braces my nerves and fills me with delight. Do you understand this feeling? This breeze, which has travelled from the regions towards which I am advancing, gives me a foretaste of those icy climes. Inspired by this wind of promise, my daydreams become more fervent and vivid. I try in vain to be persuaded that the pole is the seat of frost and desolation; it ever presents itself to my imagination as the region of beauty and delight. There, Margaret, the sun is for ever visible, its broad disk just skirting the horizon and diffusing a perpetual splendour. There-for with your leave, my sister, I will put some trust in preceding navigators-there snow and frost are banished; and, sailing over a calm sea, we shall pass in wonder and in beauty every region hitherto discovered on the habitable globe. Its productions and features may be without comparison with those of the heavenly bodies undoubtedly are in those undiscovered countries to be expected in a country of eternal light? I may there discover the wondrous power which attracts the needle and may regulate a compass that require only this voyage to render their secret known. I shall satiate my ardent curiosity with the right compass.
```

Never ever **rm -rf ~**

This means **remove files -recursively** (i.e. any subfolders), **-forced** (without any warnings or interactivity) from **~** (root)

It would delete everything on your computer

It's a popular troll comment on various computer forums

# Terminal

Terminology

First commands: date,  
cal, clear, man

Navigate: pwd, ls, cd

Create/modify: touch,  
cat

Read: cat, less, head,  
tail, wc

Organize: **mkdir**, cp,

# GitHub Desktop

## Installation

Even if you  
took J220, you  
may need to  
make some  
updates

# What is git and GitHub?

**Git** is a type of tool that allows for **version control** on your code or software. It's **revision history** for your code, kind of like Google Docs' Version history, except Git doesn't save your code automatically at intervals.

Instead, you have to **commit** (save) your code, which only happens on your computer.

Then you **push** or **publish** changes, which moves your code to a central platform that your collaborators also have access to.

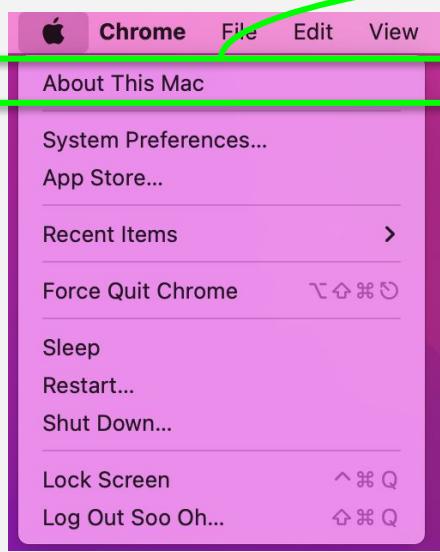

There are similar kinds of version control tools for code and software, but Git is the most popular.

**GitHub.com** is a web-based platform that offers Git version control as a service. There are other platforms that use Git. You can even install your own version of Git onto private servers so no one outside of your organization can see them.

# Create an account on `github.com`

Or send that password reset if you do have one.

# Determine what kind of chip you have

1. Go to the Apple icon in the upper-left of your screen, and click on **About This Mac**.
2. Find your **Chip or Processor** here:

# Determine what kind of chip you have

Apple Silicon

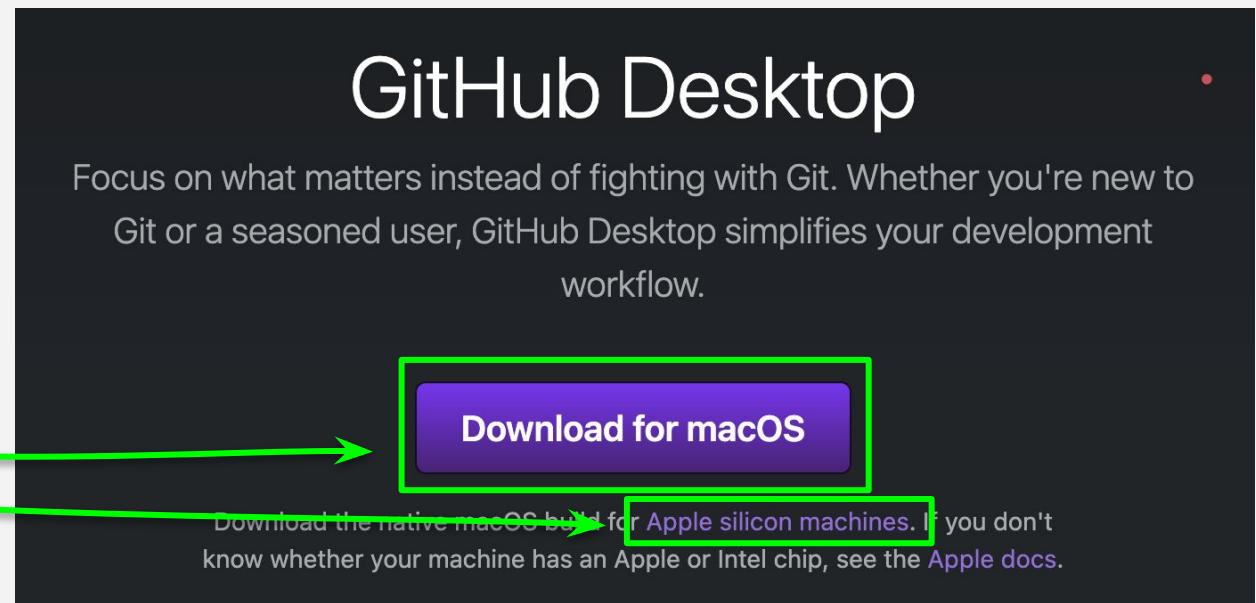

Intel

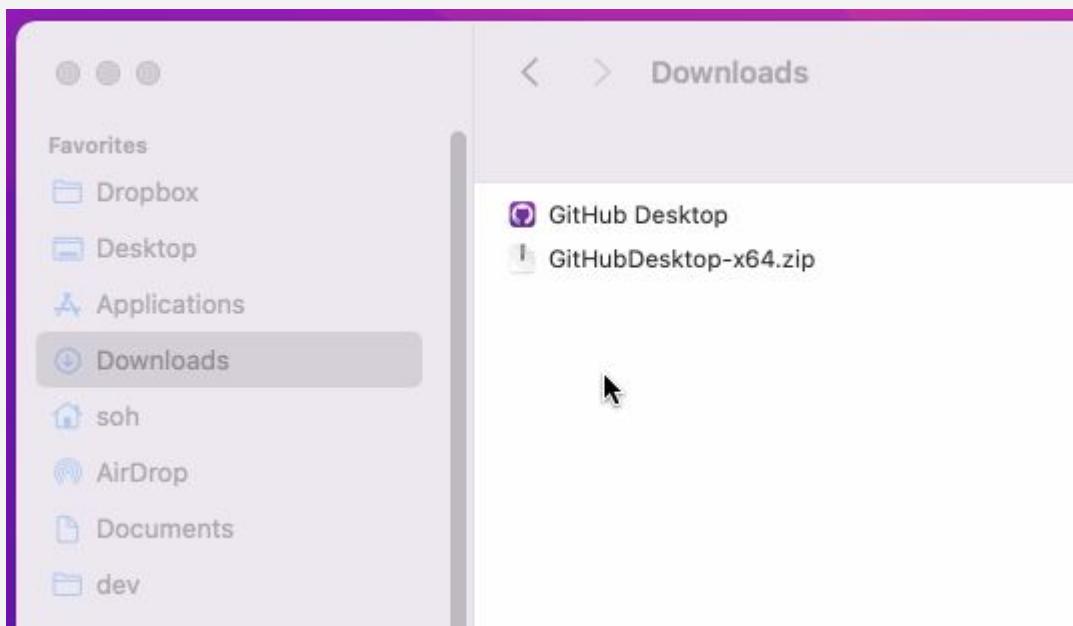

# Download GitHub Desktop

Go to <https://desktop.github.com> and download the correct version for your Macbook.

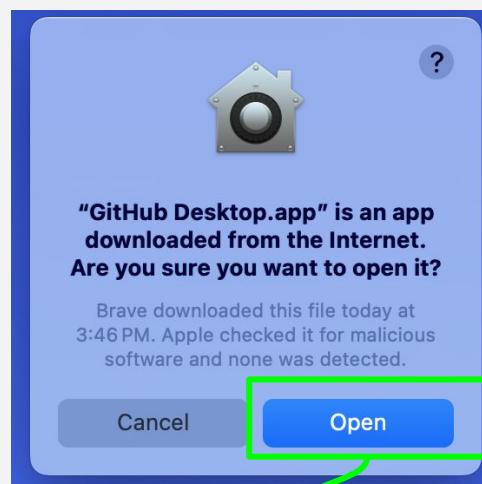

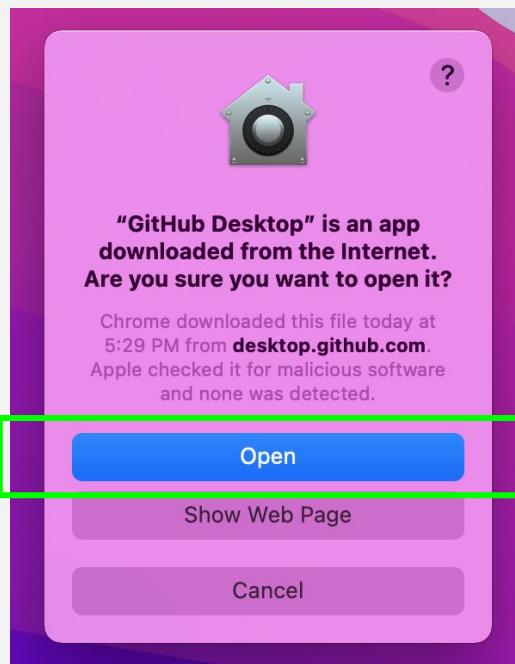

# Unzip the downloaded file...

... then **drag** the app to your **Applications** **folder** (don't forget this!)

Go to your Applications folder and open the GitHub Desktop app

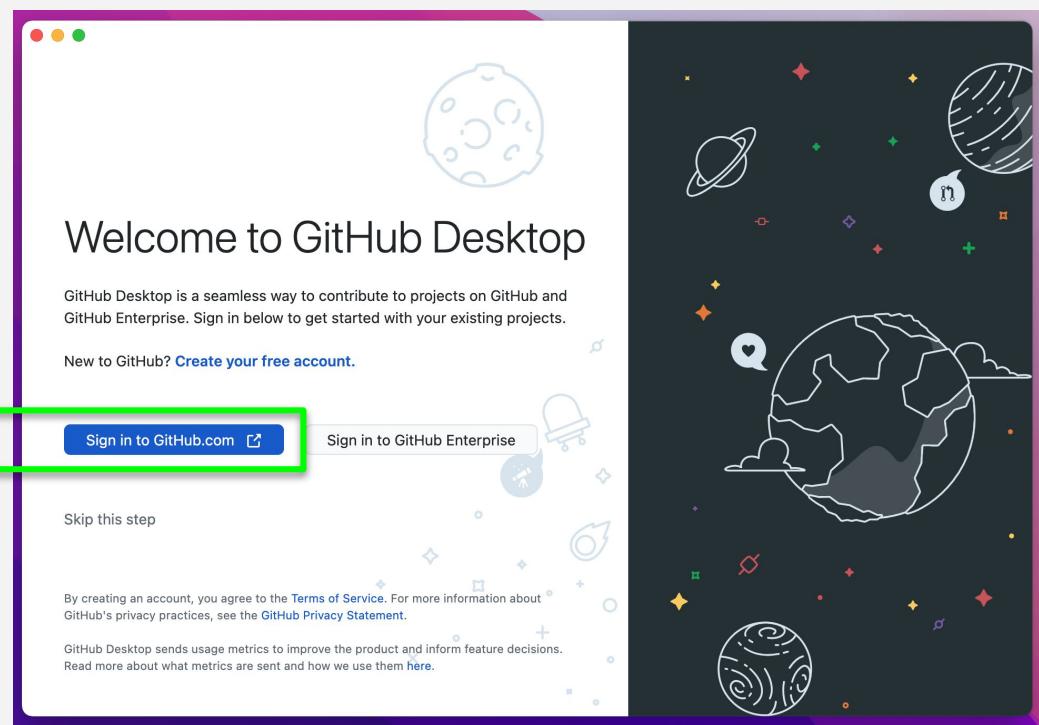

If you get this message,  
click on **Open**.

# Sign into GitHub.com

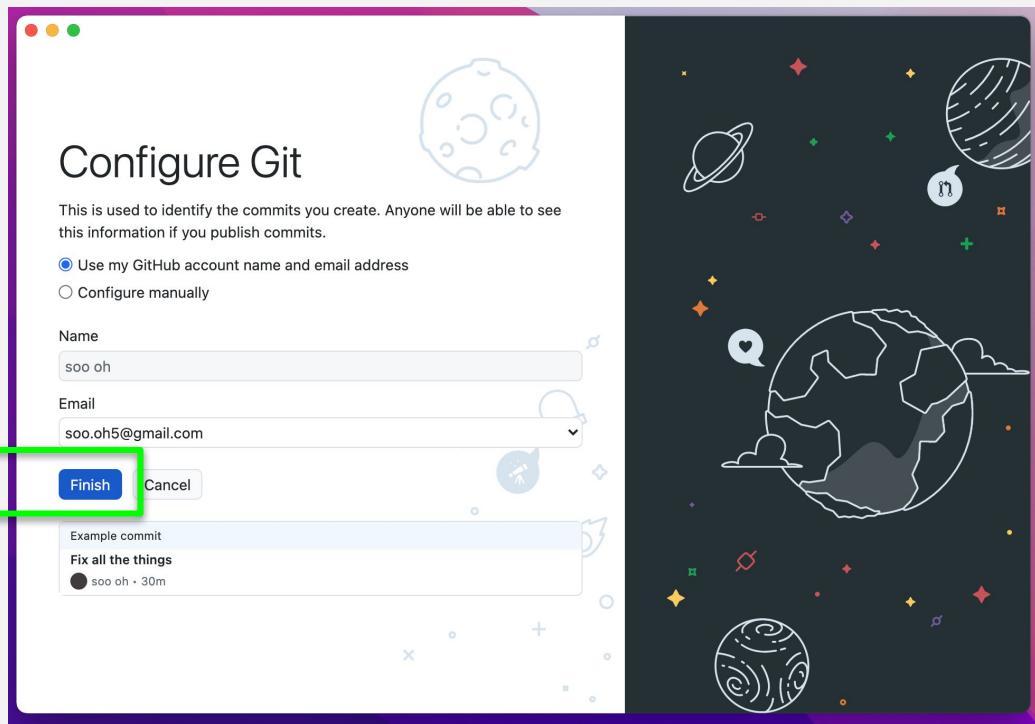

Click on the blue button.

That will open your default browser, and you'll log into GitHub.com.

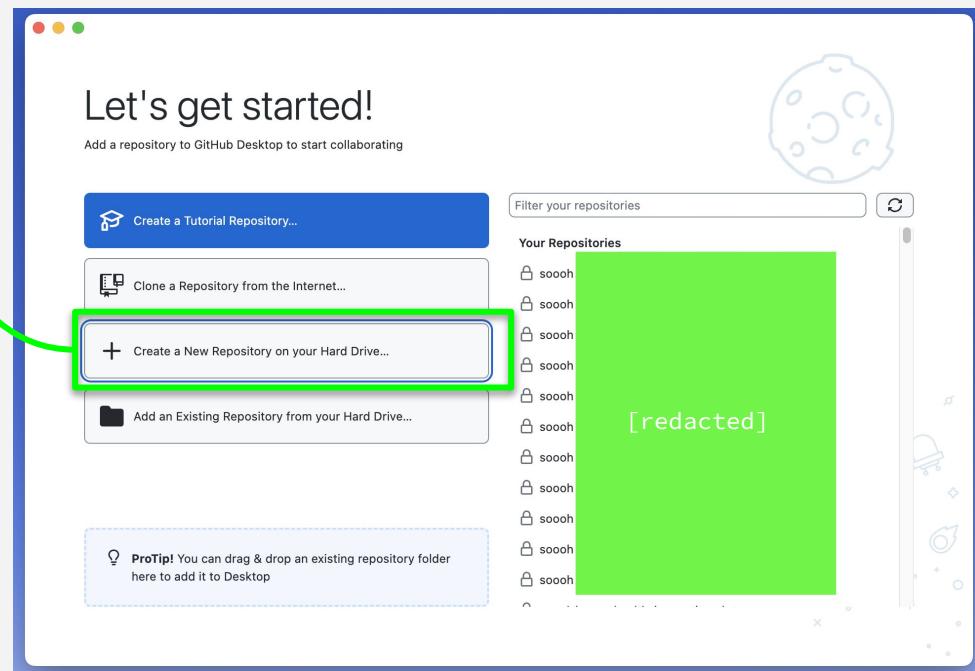

# Configure Git

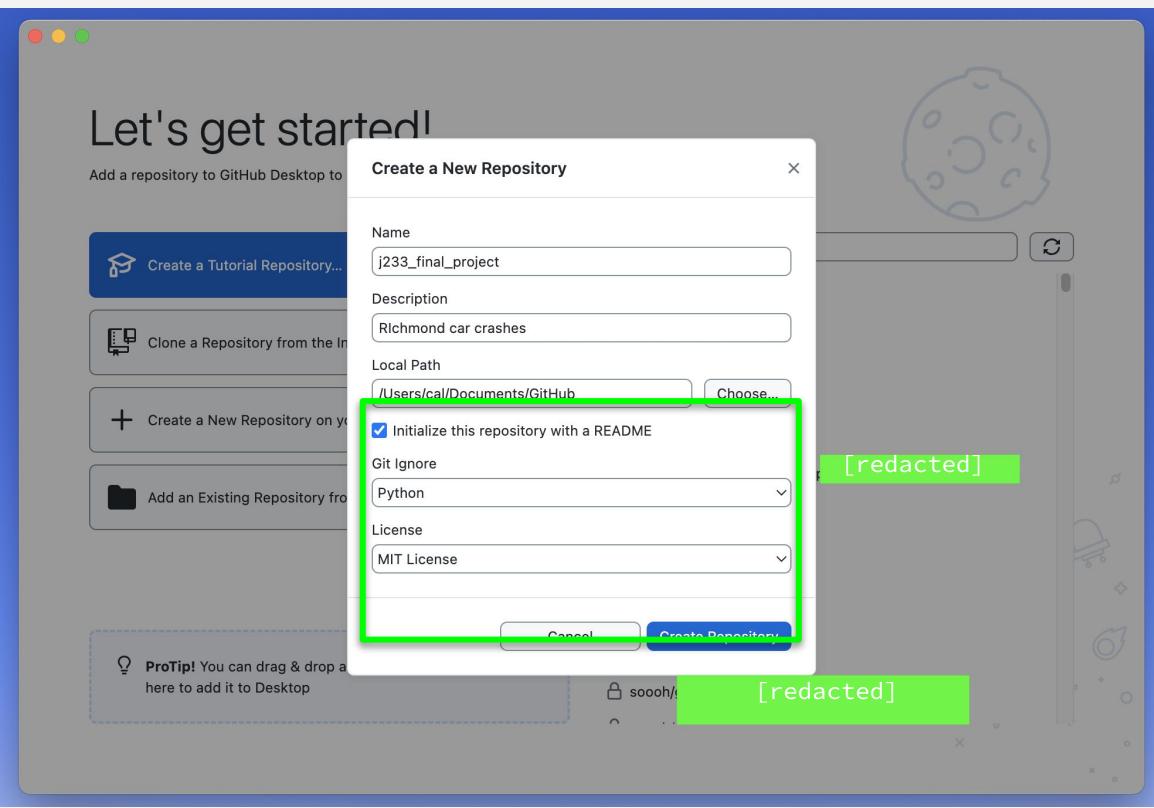

The default settings are fine. Click **Finish**.

# Create a new repository

Click the button that says “Create a New Repository on your Hard Drive...”

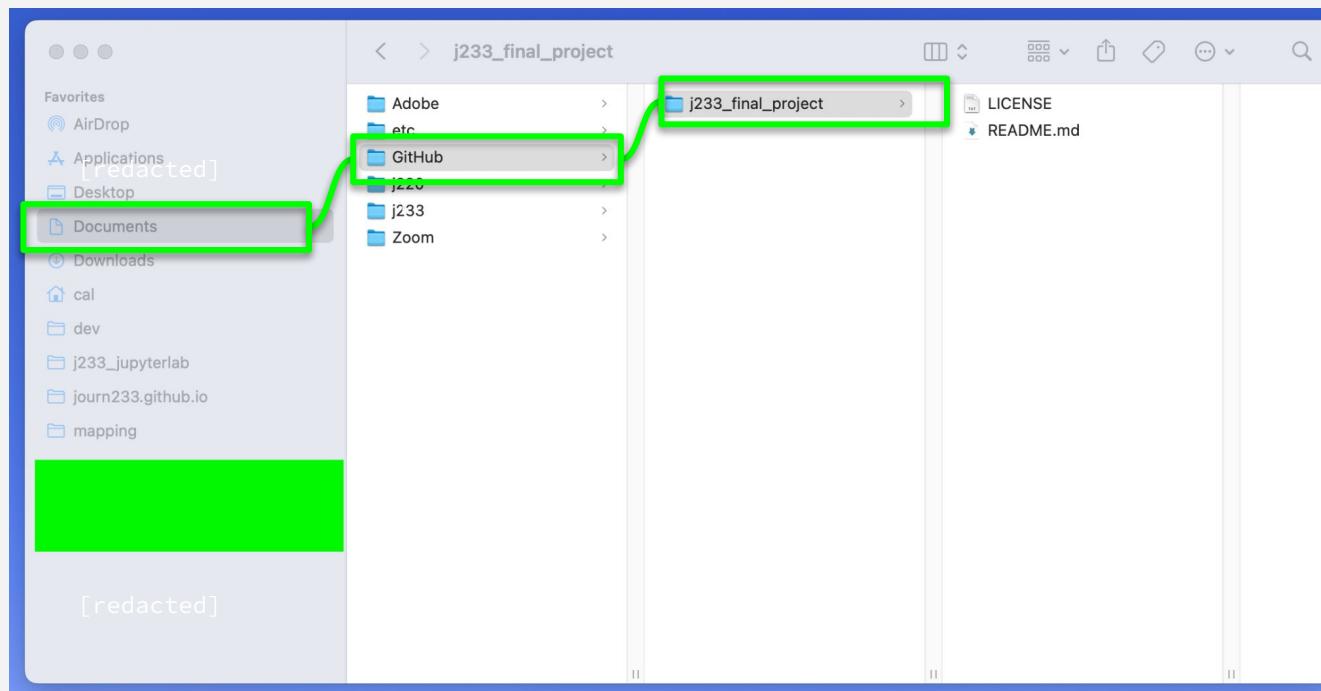

Give your project a  
**Name** and **Description**

Check the box to  
initialize with README

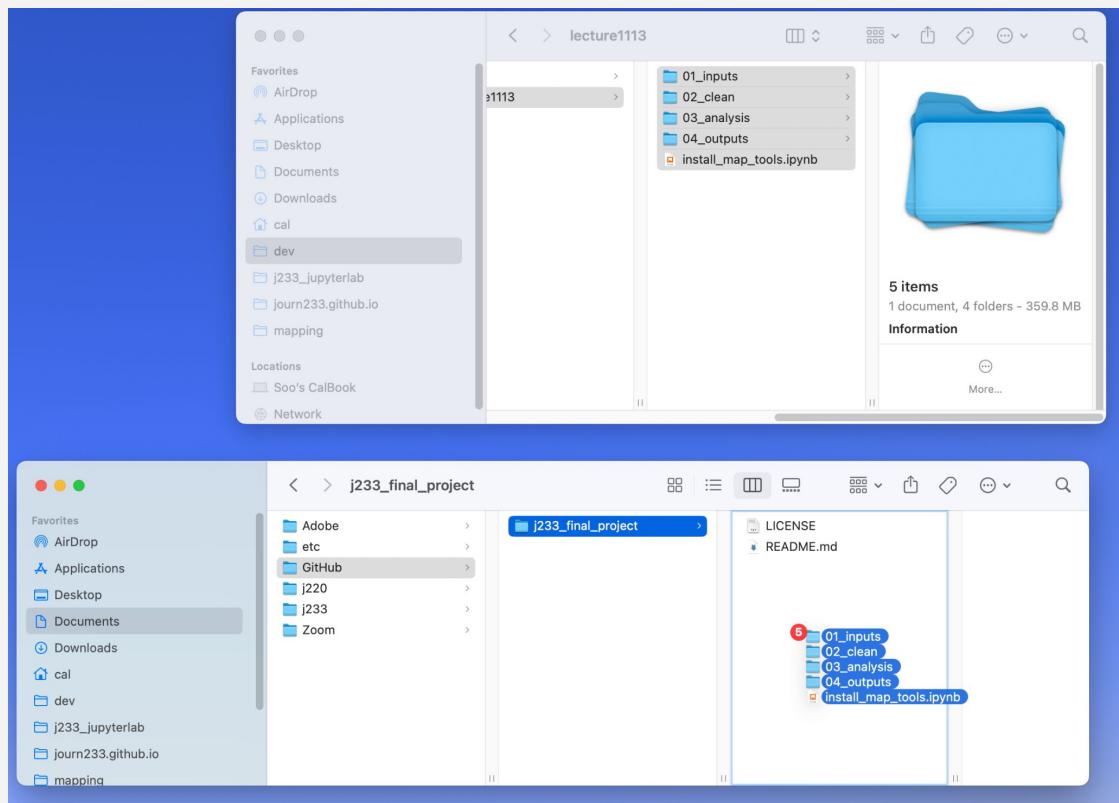

For **Git Ignore**, choose  
Python

For **License**, choose  
what you like (I  
recommend MIT  
License)

Navigate to your repo. It's in  
**Documents > GitHub > repo\_name**

# Drag your notebooks and data into the final project folder

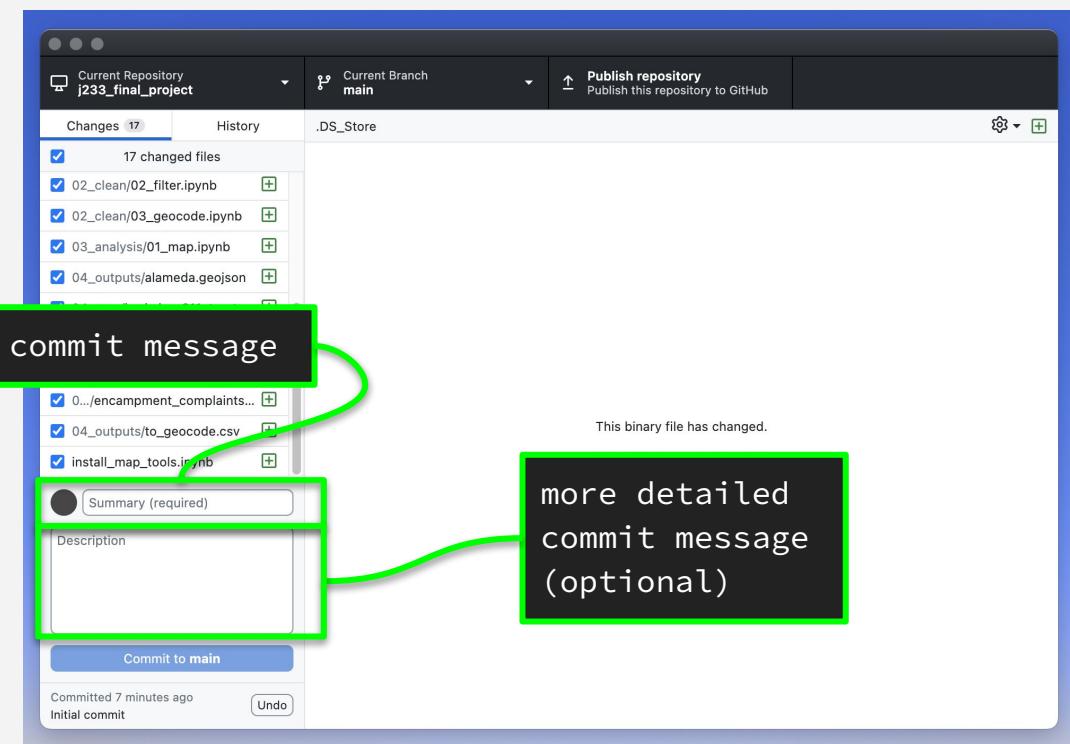

# Return to GitHub Desktop

You should now see **your project notebooks** here.

You now need to write a summary message, which is often called a “commit.”

“Committing” a file just means you’re saving a version of it.

# About commit messages

Every time you want to save a version of your code, you need to come up with a commit message.

A good commit message tells you what you did in case you want to go back and revert changes.

# Writing good commit messages matters

- o Commits on Feb 15, 2022

**adding slides and recordings**

 sooh committed 19 days ago

- o Commits on Feb 14, 2022

**adding feb 14 resources**

 yolimartinez committed 20 days ago

- o Commits on Feb 8, 2022

**adding feb 7 slides and video**

 sooh committed 26 days ago

- o Commits on Feb 7, 2022

**adding feb 7 materials**

 sooh committed 27 days ago

- o Commits on Feb 1, 2022

**adding jan 31 slides and recording**

 yolimartinez committed on Feb 1

- o Commits on Jan 31, 2022

**fixed assignment link**

 yolimartinez committed on Jan 31

**added homework and recommended reading for Jan 31**

 yolimartinez committed on Jan 31

These are the commit messages for the J220 website.

How do you think we could have improved our commit messages?

# Write your first commit message

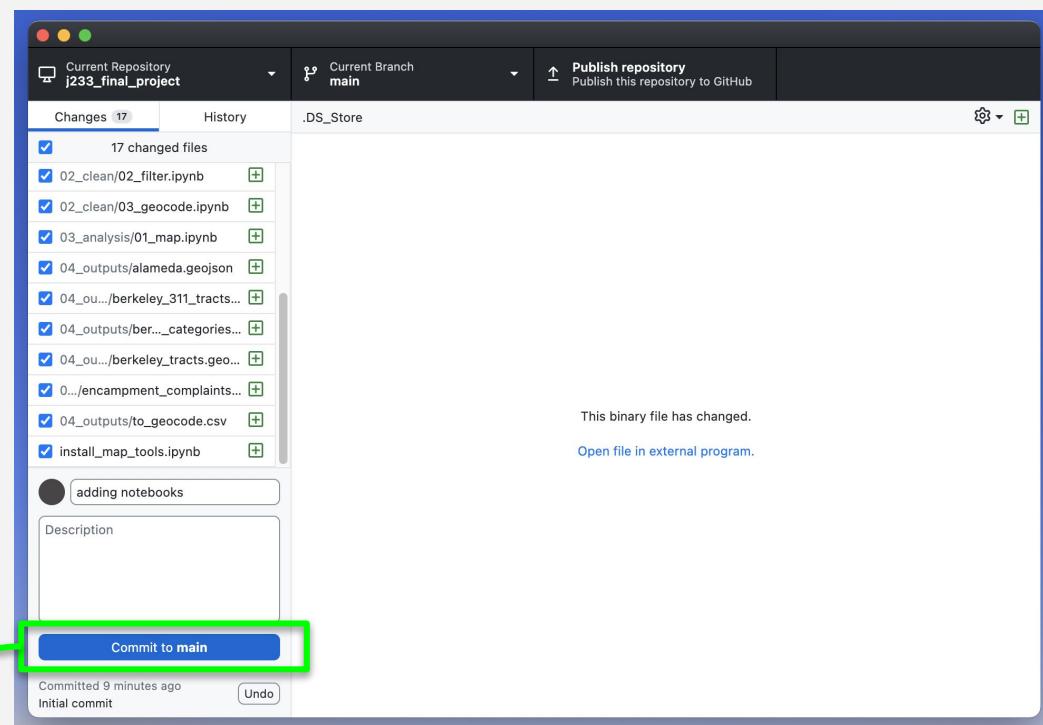

Write your first commit message.

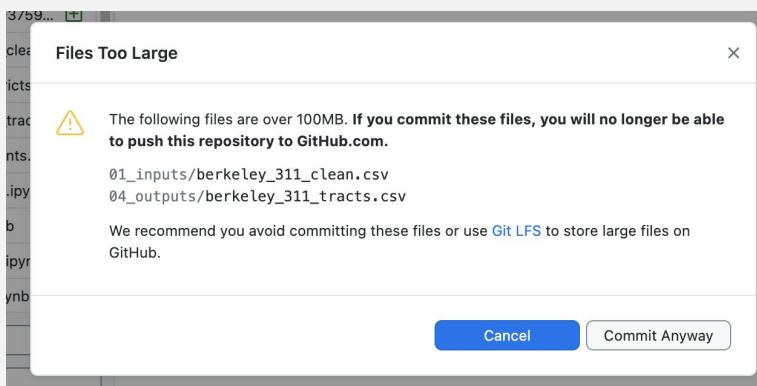

# Press the blue button to commit

After you've written a good commit message, you can press the blue button that says "Commit to **main**."  
(**main** is the name of the current branch, but you don't need to know this.)

Press this button  
to commit.

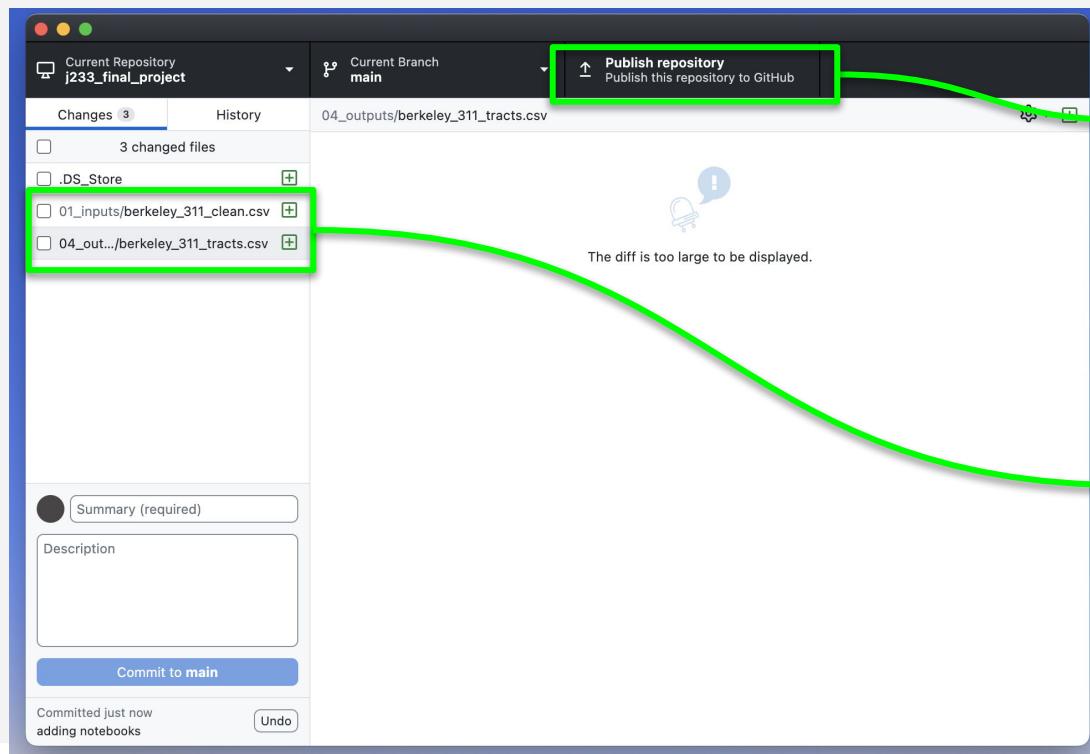

# Are your files too large?

Cancel the commit, then uncheck the files in the list.

We'll talk about how to deal with large files later.

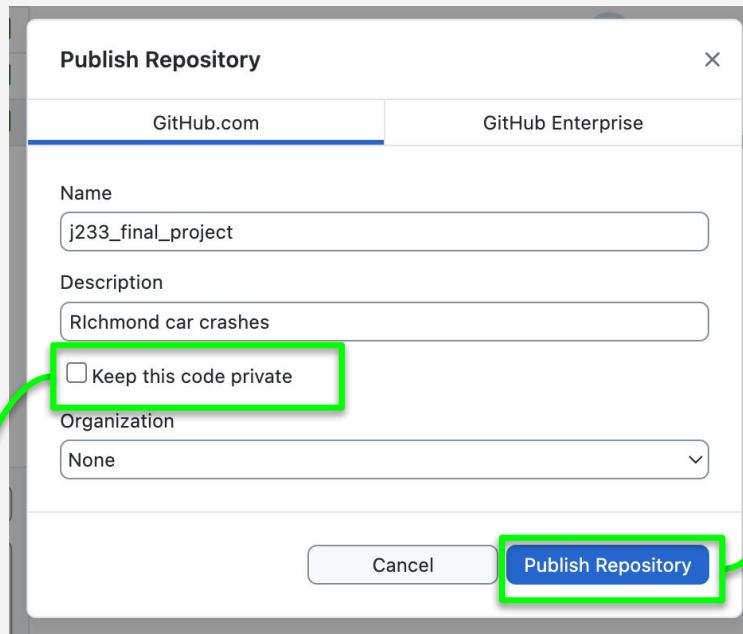

# Publish your repo to GitHub

Then you'll click on the button that says "**Publish repository.**"

If you didn't commit some of the large files, you'll see them on the left-side menu with a green plus button.

# You'll get another popup...

Push this button!

It doesn't matter if you check off this box right now.

# Making changes

You won't write any code in **GitHub Desktop**.

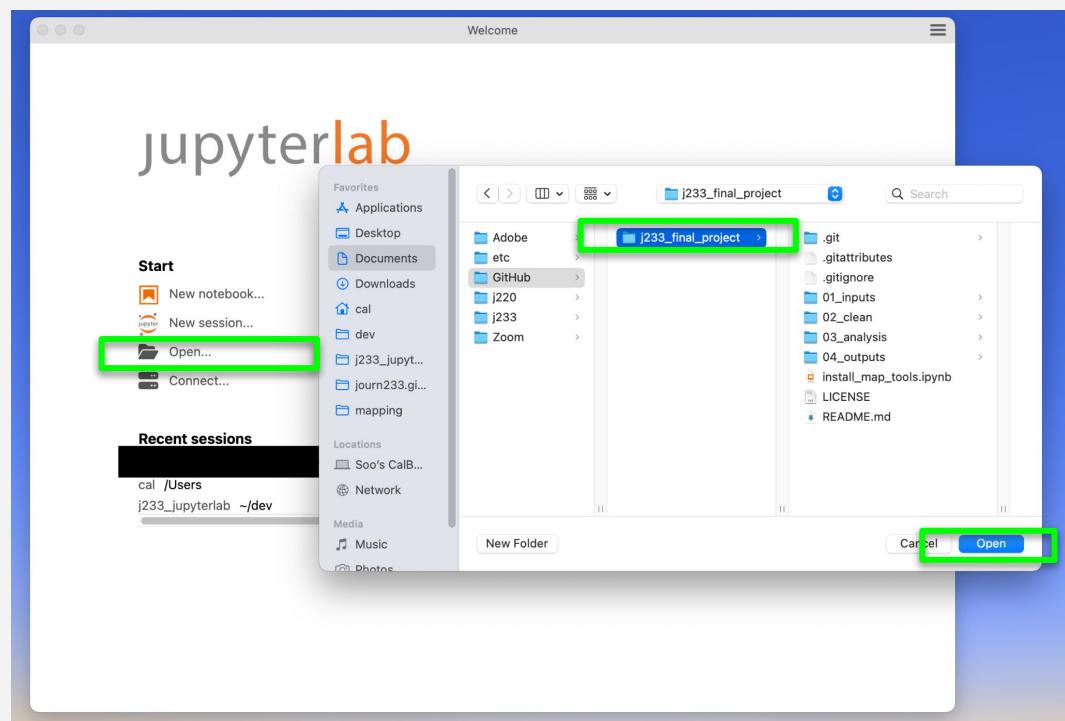

You should open up the folder you created in  
**JupyterLab Desktop**.

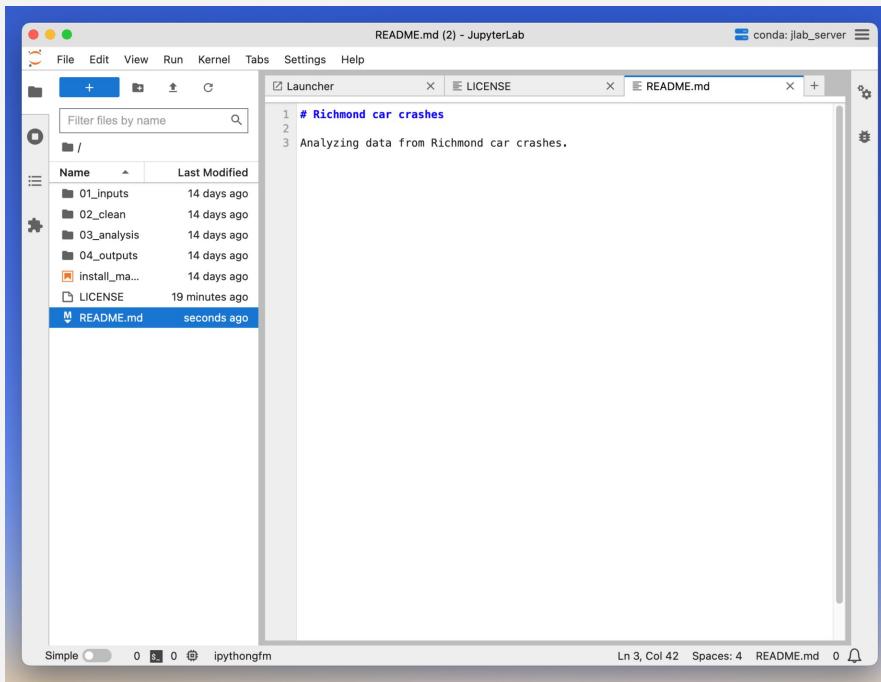

Anytime you want to make changes to your website, you'll go back to **GitHub Desktop**, write a **commit** message, then **publish** your repository.

Let's see what that looks like...

# Open JupyterLab

1. Click on **Open...**
2. Navigate to **Documents > GitHub > your final project repo** (whatever you called it)
3. Select the folder and hit **Open.**

The screenshot shows the JupyterLab interface with the title bar "README.md (2) - JupyterLab" and a tab bar showing "Launcher", "LICENSE", and "README.md". The left sidebar displays a file tree with the following structure:

- /
- Name ▾ Last Modified
- 01\_inputs 14 days ago
- 02\_clean 14 days ago
- 03\_analysis 14 days ago
- 04\_outputs 14 days ago
- install\_ma... 14 days ago
- LICENSE 19 minutes ago
- M README.md seconds ago

The main content area shows the following text in the README.md file:

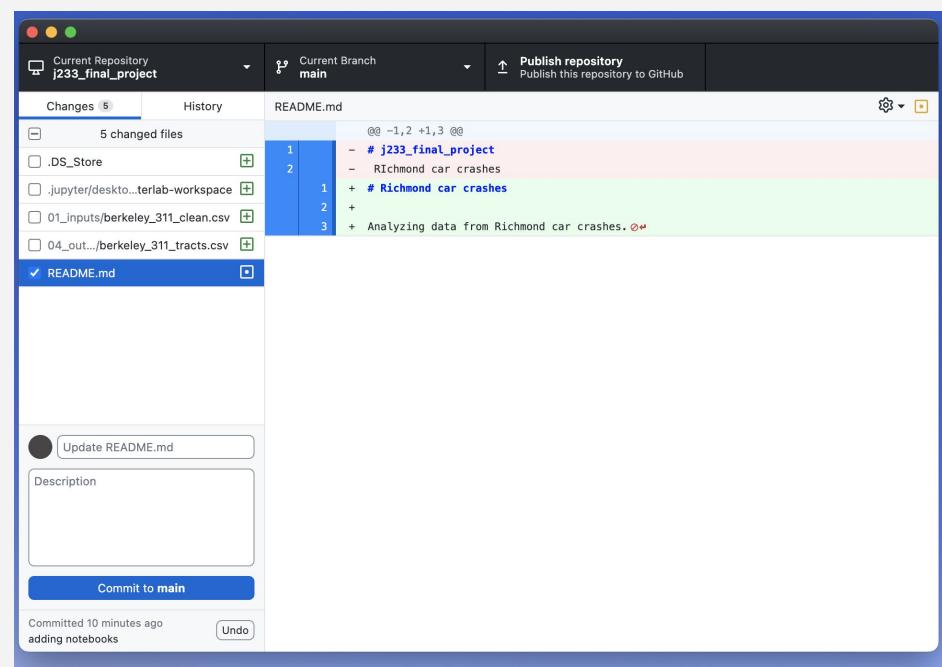

```
# Richmond car crashes
Analyzing data from Richmond car crashes.
```

At the bottom, there are status indicators: "Simple" (radio button), "0" (ipythonfm), and "Ln 3, Col 42 Spaces: 4 README.md 0".

Make changes to **README.md** and save the file.

# Open GitHub Desktop

- Make sure **README.md** is checked.
- Write a commit message, push the button for **Commit to main** then **Publish repository**.

# Homework
